Art Unit: 1761

In response to Applicant's request for reconsideration of the rejection under 35 U.S.C. 112, the finality of the last Office action is withdrawn to further clarify the issues at hand.

In view of the fact that additional errors in the original patent have been corrected through amendments to the claims, a new/supplemental oath or declaration complying with 37 CFR 1.63 and 1.175 is required.

In accordance with 37 CFR 1.175(b)(1), a supplemental reissue oath/declaration under 37 CFR 1.175(b)(1) must be received before this reissue application can be allowed.

Claims 1-15 and 46-50 are rejected as being based upon a defective declaration under 35 U.S.C. 251. See 37 CFR 1.175. The nature of the defect is set forth above.

Receipt of an appropriate supplemental oath/declaration under 37 CFR 1.175(b)(1) will overcome this rejection under 35 U.S.C. 251. An example of acceptable language to be used in the supplemental oath/declaration is as follows:

"Every error in the patent which was corrected in the present reissue application, and is not covered by a prior oath/declaration submitted in this application, arose without any deceptive intention on the part of the applicant."

Claim 49 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Art Unit: 1761

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 46-48 and 50 are rejected under 35 U.S.C. 112, first paragraph, because the specification, while being enabling for non-destructive chemotaxis assays, does not reasonably provide enablement for any and all types of non-destructive assays. The specification does not enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the invention commensurate in scope with these claims.

Applicant does not teach any and all types of non-destructive assays. Only non-destructive chemotaxis assays are contemplated. Applicant does not consider other non-destructive assays such as stereotaxis, phototaxis, electrotaxis, or geotaxis assays. To make and use the invention with non-destructive assays, other than chemotaxis, would involve extensive experimentation.

No where in the specification does Applicant contemplate any assay other than a chemotaxis assay. Applicant states on column 2, lines 32-36, that "I have developed a chemotaxis assay procedure ...", where the entire specification is specifically directed to a chemotaxis assay. Applicant does not consider other non-destructive assays such as stereotaxis, phototaxis, electrotaxis, or geotaxis assays. The assays are entirely different and the use of other assays would require extensive experimentation.

Art Unit: 1761

Claims 46-48 and 50 are rejected under 35 U.S.C. 112, first paragraph, because the specification, while being enabling for chemical agents, does not reasonably provide enablement for any and all types of agents. The specification does not enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the invention commensurate in scope with these claims.

Applicant does not teach any and all types of agents. Only chemical agents are contemplated. To make and use the invention with an agent other than a chemical agent would involve extensive experimentation.

Claims 46-48 and 50 are rejected under 35 U.S.C. 251 as being improperly broadened in a reissue application.

The claims have been broadened as Applicant does not teach any and all types of non-destructive assays or any and all types of inducing agents

All of the claim limitations have been considered.
